LETTER FROM THE DIRECTOR

Kingston William Heath, PhD

As director of the graduate program in historic preservation at the University of Oregon, I am proud of the work our alumni, faculty, students, and sponsors have done as stewards of our nation’s cultural heritage. I am particularly honored to be a part of an academic program that has demonstrated such sustained excellence in our profession. I look forward to working with the newest group of future preservation professionals.

Our program has two major emphases. The first is experiential learning—the hands-on experience of doing preservation in the field. Continuing partnerships with state and national park services, the Oregon State Historic Preservation Office, the Montana Heritage Commission, and the City of Trogir, Croatia, are among just a few cooperative partnerships that provide opportunities for students to experience work in progress.

Secondly, our program emphasizes research in the field of preservation theory and practice, concentrating on the cultural, historical, technological, and environmental factors that have shaped our world. By immersing ourselves in the cultural landscapes in which we work, we develop a greater understanding of the forces that determined, and continually transform, the nature of those places. Through our understanding of heritage transformation (the patterns of change within various cultural settings), we are able to promote and guide sustainable stewardship of our built resources around the globe.

Both programmatic goals are synthesized and combined with an international focus in the curriculum of the Croatia Conservation Field School. Here, our students put both the theoretical and applied aspects of our profession to work as we document, assess, and restore ancient buildings so that they may once again play vital roles in their communities. The Croatia Conservation Field School, then, is designed for those who wish to practice in the field of international heritage conservation, or who simply want to understand and help implement different heritage policies and practices outside of the United States.

Our domestic program, the Pacific Northwest Preservation Field School, is an award-winning summer field practicum that stresses traditional building practice and stewardship throughout the region. In its nineteenth year, the field school is supported by regional partners in federal, state, and local agencies in addition to the University of Oregon.

Despite our long record of successes, we must also maintain an awareness of and respond to the changes in our social, political, and economic environments. Continued assessment and adjustment of our program are critical to our continuing viability in an evolving world. To this end, we are launching a new specialization in sustainable preservation in collaboration with the architecture, landscape architecture, and planning, public policy and management departments. We believe this specialization will help to better prepare our students to foster environmentally responsible and socially uplifting environments in today’s society.

Please feel free to visit us, take part in some of these many activities, and share in the excitement of historic preservation at the University of Oregon!

Best wishes,

Kingston William Heath, PhD
Professor and Director
Historic Preservation Program
5233 University of Oregon
Eugene OR 97403-5233
541-346-2115
kwheath@uoregon.edu
The University of Oregon is located in Eugene, a town founded in the heart of the lush Willamette Valley by Eugene Skinner in 1849. Eugene and its neighboring city of Springfield are home to a community of approximately 340,000 people. Travel in and around Eugene is supported by an extensive network of bicycle paths and lanes, as well as by a transit system that is provided free to University of Oregon students. Easy accessibility to cities such as Portland, Seattle, Vancouver, Sacramento, and San Francisco offers students opportunities to experience the urban context of the Pacific Northwest and the western United States. In addition, flights from the Eugene Airport provide convenient service to many cities nationwide.

Voted as one of the nation’s most livable cities, Eugene is about an hour’s drive from the Pacific Ocean to the west and the Cascade Mountains to the east. This proximity offers a wide range of climates and terrain that provides extraordinary recreational and research opportunities. Locally, Eugene and the immediate area support many recreational activities with 157 parks, the Willamette and McKenzie Rivers, bike paths, hiking trails, and municipal recreation centers.

Cultural life is supported by the award-winning Hult Center for the Performing Arts as well as a wide range of small theaters and popular music clubs, art galleries, and the annual, internationally acclaimed Oregon Bach Festival. Nicknamed “Track Town, USA,” the city has hosted the track-and-field Olympic Team Trials at the university’s Hayward Field, and has been selected to host them again in 2016. Eugene and the state of Oregon are lucky to have an active preservation community; you may find a list of preservation organizations at hp.uoregon.edu/resources/links.

The University of Oregon, located on a 295-acre campus, was established in 1876; it is beautifully landscaped with more than 3,000 trees. It is home to Deady Hall (1873–76, William W. Piper) and Villard Hall (1885–86, Warren H. Williams), two of Oregon’s national historic landmarks. Campus facilities include the three-million-volume University of Oregon Libraries, extensive computer facilities, the Jordan Schnitzer Museum of Art, the Museum of Natural and Cultural History, the 54,000-seat Autzen Stadium, and the recently completed Matthew Knight Arena, a multipurpose venue that received a Gold certification from the U.S. Green Building Council’s Leadership in Energy and Environmental Design (LEED) program. With an enrollment of nearly 25,000 students, the university is a major teaching and research institution, one of only sixty-two members of the select Association of American Universities. Its faculty and staff of about 4,500 is distinguished by numerous awards, fellowships, and publications. The Historic Preservation Program, now in its thirty-third year, is among only thirty-two master’s programs in this specialization area nationally. There are only three such programs on the West Coast.
Above: Deady Hall, University of Oregon campus.
INTRODUCTION

SCHOOL OF ARCHITECTURE AND ALLIED ARTS

For nearly 100 years the University of Oregon’s School of Architecture and Allied Arts (A&AA) has been recognized nationally for its innovations in architectural education. Today, the spirit of these innovations still pervades the departments and programs in the school and the Historic Preservation Program. The resources of the school represent an opportunity for breadth and depth in all areas of study. There are approximately 1,600 students and 191 faculty members in the school. It is housed primarily in Lawrence Hall, which contains design studios, exhibition rooms, workshops, classrooms, a library, and offices. A major $8 million addition to the school’s facilities was completed in 1992.

The Watzek House and its garden hold a pivotal position in the history of architecture in the Pacific Northwest. Designed by John Yeon, the Watzek House was designated a National Historic Landmark in 2011. The Watzek House is owned and maintained by the State of Oregon for the use of the University of Oregon’s School of Architecture and Allied Arts for educational and research purposes.

The A&AA Library, a branch of the university’s library system, has a collection of more than 80,000 books and periodicals. Resources include a reference collection, a collection of building plans, 150,000 slides and digital images, mounted photographs, and product catalogs. A hallmark of the library is its two-story reading room named after Marion Dean Ross, whose bequest has enabled the development of a rich collection of rare architectural history books. The Visual Resources Collection, housed in the Digital Scholarship Center located at Knight Library, provides digital image resources and services and is considered one of the best in North America.
HISTORIC PRESERVATION PROGRAM

The University of Oregon’s Historic Preservation Program is housed within the School of Architecture and Allied Arts. The graduate program was established in 1980, and an undergraduate minor open to all university majors (upon approval) was initiated in 1987.

The Historic Preservation Program is best described as having broad cultural concerns with a technical emphasis. Attention is given to historic places, buildings, and landscapes in terms of their specific forms, materials, construction, and use. The cultural and theoretical context in which they were developed is addressed, as is the impact of time upon their materials, meanings, and needs. The technologies, interpretations, and means for sustaining the presence of historic places in the future are also emphasized.

Students gain an understanding of historic resources and the processes for their preservation. This includes core courses in research methods, preservation history and theory, architectural history, and the economic, legal, and administrative processes of preservation. Students choose from three focal areas: 1) sustainable preservation theory, design, and technology 2) cultural resource management; or 3) resource identification and evaluation. Other focal areas are feasible but must be approved in advance by the submission of a curriculum plan by the student by the second term of the student’s first year.

Courses are augmented by fieldwork in the urban, suburban, and rural areas of the region. Oregon contains Native American sites, rural buildings and landscapes developed by U.S. and European immigrant pioneers from the 1830s, as well as urban development since the 1840s. More recent transformations of the landscape by various ethnic groups and technological innovations are also explored. Extensive instructional use of the region takes place through an emphasis on the cultural and technical aspects of vernacular resources, field trips, participation in projects at the university, and through local community groups. There is also frequent involvement with the area’s professionals, officials, and agencies concerned with historic resources.

Recent experiential opportunities include window restoration and traditional earth construction workshops, documentation for a Historic American Buildings Survey for the Alaska Regional Office of the U.S. National Park Service; a preservation field guide for the community of Ebeys Landing National Historic Reserve, Whidbey Island; a condition assessment and stabilization of Gilbert’s Cabin in North Cascades National Park; a condition assessment of Frank Lloyd Wright’s Usonian Gordon House in Silverton, Oregon; the documentation of the Finney House frontier cabin in Nevada City, Montana; the limestone roof replacement on a late sixteenth-century stone cottage on the island of Drvenik Veli, Croatia; and the reconstruction of the Ferry House porch in Ebeys Landing National Historic Reserve, Whidbey Island.

In addition to providing hands-on training in what might be considered mainstream preservation activities, this program emphasizes the importance of cultural conservation including issues of diversity, identity, and community development. This includes a concern not only for how various ethnic groups shaped buildings and landscapes in the distant past, but how similar settings are reproduced by cultural groups in the present. Individual research efforts by students are augmented by visiting lecturers, such as those by Boyd Pratt, Jean Carroon, and Gunny Harboe.

Beyond completing core and focal area courses, each student is required to complete individualized study, including reading and thesis research, a summer internship, and a thesis or terminal project. Some former students have chosen to develop specialties and concurrent master’s degrees in closely related fields such as architecture, landscape architecture, and planning, public policy and management; others have created more unique combinations with studies in museums, economic development, and Russian and East European studies. Besides encouraging students to develop an individualized course of study, the program is characterized by students who exhibit self-motivation and individual initiative. These traits, which are not only expected but are also necessary for successful completion of the program, contribute to the professional growth of students.

Graduates of the Historic Preservation Program are employed in preservation-related fields over a wide geographic area. Some choose to pursue work in the private sector as specialists in architectural offices or as consultants. Others serve in the public sector with municipal planning departments, state historic preservation offices, or federal cultural resources divisions. Some graduates choose to work with nonprofit agencies, while others select careers in preservation and restoration.
APPLICATION
REQUIREMENTS AND DEADLINES

Applicants come from a variety of previous academic backgrounds and degrees. Although no particular degree is favored, applicants whose background includes prior course work or work experience in historic preservation, architecture, landscape architecture, historical archaeology, cultural anthropology, and architectural or public history are most prepared for this program. After entering the program, students from other disciplines may take courses to strengthen areas in which they may be lacking.

Over the past three years, the acceptance rate of applicants has averaged approximately 60 percent. Typically a group of ten to fifteen students is selected to begin the program in the fall term. Applications may be considered at other times during the year only if the applicant has previously completed introductory graduate level course work in preservation. Please inquire if there are special circumstances that will affect your term of entrance. When reviewing applicants, the Historic Preservation Program Committee looks for evidence of scholarly achievement, research and writing effectiveness, and self-motivation. A demonstrated understanding of the preservation field is a determining factor. The application deadline is January 15 for the following fall term.

Application packets must include the following:

1. Graduate application for admission and $50 application fee (online at gradweb.uoregon.edu/online_app/application/guidelines1.asp)
2. Official transcripts of all previous college work (two from each degree-granting school)
3. Statement of intent
4. Biographical summary or résumé
5. Educational and professional summary
6. Selected examples of written material, graphic work, or both
7. Three letters of recommendation
8. For international students whose native language is not English, an official TOEFL examination score is required; the minimum score for acceptance in the program is 88
9. Graduate Records Examinations (GRE) scores (optional)

Please submit all application materials by postal mail (with the exception of the online application and fee) to

Graduate Admissions
Historic Preservation Program
School of Architecture and Allied Arts
5233 University of Oregon
Eugene OR 97403-5233

The deadline for submitting an application for admission for fall term 2014 is January 15, 2014. Applicants will be informed of the committee’s decision by March 15.

Please visit our website for further information about the application process and contacts for support: hp.uoregon.edu/admission.
FINANCIAL AID

WESTERN REGIONAL GRADUATE PROGRAM
The Historic Preservation Program participates in the Western Regional Graduate Program (WRGP, formerly WICHE). This advantageous program allows students from participating states to receive in-state tuition while completing their master of science in historic preservation at the University of Oregon. States currently participating in the WRGP include Alaska, Arizona, California, Colorado, Hawaii, Idaho, Montana, Nevada, New Mexico, North Dakota, Oregon, South Dakota, Utah, Washington, and Wyoming. Students must be capable of producing documents that verify their state residency. The UO Historic Preservation Program WRGP Application and more information is available here: hp.uoregon.edu/financialaid.

GRADUATE FELLOWSHIPS
Two full-year Graduate Administrative Fellowships (GAF) and three one-term Graduate Teaching Fellowships (GTF) are available each academic year within the Historic Preservation Program. The Historic Preservation Program Support GAF assists the program director and office coordinator with informational materials and special events. The Pacific Northwest Field School GAF is the dedicated support person for the field school director and coordinates details of the annual field school. The three instructional GTF positions assist Professor Heath with course preparation for the American Architecture from a Preservation Perspective series. These positions are open to all historic preservation students; however, preference is given to students entering their second year in the program. The fellowship call goes out each year in the spring for awards given the following academic year.

In addition to the internal graduate fellowships, historic preservation students often hold graduate fellowships in other departments or programs while pursuing their studies. The Graduate School maintains a complete listing of the open positions throughout campus here: gradschool.uoregon.edu/gtf-openings.

SCHOLARSHIPS
The scholarships described below are available to currently enrolled historic preservation (HP) graduate students at the University of Oregon. In addition to the listed scholarships, opportunities for travel awards are available periodically by the program (the office coordinator will send a call for applications). Some scholarship awards are available through a competitive application process, while other awards are determined through nomination by faculty members, the Historic Preservation Committee, or both. Not all awards are available each year.

James J. and Kathryn Walton Award (HP only)—up to two awards annually, $500–$1,000. Awarded to provide broad, unrestricted support to admitted historic preservation students. Awarded by faculty nomination.

Philip H. Dole Historic Preservation Scholarship (HP only)—up to two awards annually, $500–$1,000. Awarded to provide support to historic preservation graduate students who have been selected to receive a GTF appointment and have demonstrated academic merit. Awarded by application.

Heritage Research Fund (HP only)—up to four awards annually, $500–$1,000. Awarded to historic preservation graduate students pursuing multidisciplinary research projects. Awarded by application.

Greg Hartell Historic Preservation Student Internship (HP only)—one award annually, $1,500. Awarded to support a University of Oregon historic preservation student who has been selected to participate in an internship at Crater Lake. Awarded by faculty nomination.

Betty Peting Travel Fellowship (HP or architecture only)—one award annually, $5,000. Awarded to support travel outside of North America that will advance his or her research and study aspirations in architecture, historic preservation, or both. Applicants must be in their final quarter of graduate study, declared majors in architecture or historic preservation, can travel within 120 days of graduating, and can demonstrate consistent academic excellence. A follow-up presentation (written or oral) is required. Awarded by application.

Historic preservation students are often eligible for scholarships and awards offered through A&AA and the UO respectively. Please visit the A&AA Scholarships and Awards page (aaa.uoregon.edu/admissions/scholarships) regularly for details and deadlines as well as the UO Student Financial Aid and Scholarships page (financialaid.uoregon.edu). In addition to applying for scholarships, the program strongly advises applicants to submit the Free Application for Federal Student Aid (FAFSA)—visit the website for more information: www.fafsa.ed.gov. Many students qualify for federal work-study allowances as part of their FAFSA award package.

EMPLOYMENT OPPORTUNITIES
Many preservation students have successfully located part-time employment while enrolled at the University of Oregon. Temporary, summer, and part-time jobs, both on campus and off, are listed on the UO Career Center website (career.uoregon.edu) throughout the year.

On occasion, preservation-related work opportunities are available to qualified students who have completed their first year of course work. For example, students have been paid for documenting the Eagle Creek Overlook in the Columbia River Gorge, conducting paint analysis on private residences, surveying neighborhoods, writing a preservation plan for the Eugene Masonic Cemetery, and completing National Register nominations.
The Historic Preservation Program at the University of Oregon has a long history of being one of the premier preservation programs in the country. With one of the longest-running historic preservation field schools and a rich course selection that includes working directly with historic fabric, graduate students are given ample opportunities to develop their preservation field skills. In the same manner, the program has developed a strong academic component, providing the student with the conceptual and theoretical framework and exposure to the range of preservation issues that go beyond the physical. The UO’s graduate program is committed to a curriculum that develops your capacity to engage and discuss a broad range of preservation issues with clients, consultants, preservation agencies and government offices. Your ability to simultaneously provide guidance to decision-makers who may be outside the preservation field will greatly aid you in your future career.

CREDIT AND GRADING REQUIREMENTS

- The Graduate School requires that a total of 24 credits be taken for letter grades in residence at the University of Oregon. This requirement applies to all core courses (17 credits) and all three of the architectural history courses (12 credits).

- Students must maintain a GPA of 3.00 or higher; the lowest accepted passing grade for any graduate level course is a B-.

- Students who do not follow the required core sequence and prerequisites will be deemed as not making satisfactory progress toward their degree by the Historic Preservation Committee (unless prior approval has been secured by the program director).

- The Graduate School requires that a student be registered for a minimum of 3 credits each term in order to maintain continuing status as an enrolled graduate student. In cases where a student is receiving financial aid or holding a graduate fellowship, additional credits are required.

- For the two-year degree, the number of credits for required classes, elective, internship, and research are

  Core courses .................................................. 17
  Architectural history courses (three course minimum)  12
  Focal area courses (five course minimum) ................. 18
  Individualized study:
    Internship and practicum ............................... 5
    Independent research ................................. 2
    Thesis or terminal project ........................... 12
  Electives ...................................................... 7
  Total credits required .................................... 73
1. CORE COURSES (17 CREDITS)

The understanding of preservation theory and practice provides a solid foundation for historic preservation professionals. The following courses are designed to provide that basis.

<table>
<thead>

Note: AAP 511 is a prerequisite for AAP 531, AAP 541 Legal Issues in Preservation, AAP 510 Preservation Economics, and AAP 515 Transportation and Preservation may count toward your focal area requirement if not taken as a core course. * indicates an experimental course, which means the course is under development and has not yet received formal acceptance to the curriculum.

2. ARCHITECTURAL HISTORY COURSES (12 CREDITS)

The field of historic preservation requires a solid foundation in the historical development of cultural resources. The following courses contribute to the basic understanding of historical and cultural processes and technological innovations that shape our built environment. At least two of these courses must be taken from the AAP 521–523 series, American Architecture from a Preservation Perspective. All three courses taken to fulfill the required 12 credits in architectural history must be taken for a letter grade.

Note: ~ indicates an experimental course, which means the course is under development and has not yet received formal acceptance to the curriculum. * indicates a course is an occasional offering, and does not have a set year and term scheduled.
3. FOCAL AREAS (18 CREDITS)

For advising purposes, three focal areas have been developed. In order to focus their studies, students select courses from one of the three areas. Those who want to pursue a broader range of interests may select courses from more than one of the focal areas and develop an approved alternative focal area. It is the student’s responsibility to construct such an alternative focal area and present it to the program director for approval no later than the second quarter of the first year of study.

Focal Area I: Sustainable Preservation Theory, Design, and Technology
Focal Area II: Cultural Resource Management
Focal Area III: Resource Identification and Evaluation

Focal Area I: Sustainable Preservation Theory, Design, and Technology

Focusing on the practice of preservation, emphasis is placed on the skills needed to research, plan, and direct the restoration and adaptive reuse of buildings, places, and landscapes as well as to determine the appropriate levels of treatment.

Focal Area I Courses (18 Credits)
The following courses are intended to support the student’s chosen focal area by addressing technical issues, economic drivers, architectural theory, preservation policy, and the design process.

- AAAP 510 Adaptive Use Studio "*
- AAAP 510 American Building Construction History "*
- AAAP 510 Building Pathology: Masonry "*
- AAAP 510 Building Pathology: Wood "*
- AAAP 510 Graphic Communication of Ideas "*
- AAAP 510 Historic American Buildings Survey "*
- AAAP 510 Historic Structures Report "*
- AAAP 510 Interpreting Vernacular Settings "*
- AAAP 510 Preservation Economics "**
- AAAP 510 Principles of Adaptive Reuse "*
- AAAP 510 Sense of Place: Oregon "*
- AAAP 510 Sustainable Preservation "*
- AAAP 515 Transportation and Preservation "**
- AAAP 541 Legal Issues in Historic Preservation "**
- ARCH 540 Human Context of Design.
- ARCH 570 Building Construction.
- ARCH 633 History of Sustainable Design.
- LA 580 Landscape Preservation "*
- PPPM 532 Urban Revitalization
- PPPM 552 Public Participation in Diverse Communities "*
- OLIS 620 Urban Ecological Design
- OXEU 688 Croatia: Field Recording Methods and Site Documentation
- OXEU 688 Croatia: Preservation Field Practicum

Note: "~ indicates an experimental course, which means the course is under development and has not yet received formal acceptance to the curriculum. "*" indicates a course is an occasional offering, and does not have a set year and term scheduled. "**" indicates a course that may be used in the focal area if not being used in the core or architectural history area requirements. Courses that are unmarked are offered every year or every other year. Additional courses may be offered that satisfy focal areas.

Focal Area II: Cultural Resource Management

Embodied in historic preservation is the management of cultural resources. This focal area provides the legal, planning, and management skills needed for individuals to work within organizations that support efforts to manage cultural resources in both the public and the private sectors.

Focal Area II Courses (18 Credits)
The following courses are intended to support the student’s chosen focal area by addressing broader issues in cultural management, policy, and planning as well as the skills often required in supporting these activities.

- AAAP 510 Historical Archaeology and Preservation "*
- AAAP 510 Preservation Economics "**
- AAAP 510 Sense of Place: Oregon "*
- AAAP 510 Sustainable Preservation "*
- AAAP 515 Transportation and Preservation "**
- AAAP 541 Legal Issues in Historic Preservation "**
- AAD 510 Cultural Museums "*
- AAD 529 Museum Education
- AAD 612 Cultural Administration
- ANTH 549 Cultural Resource Management
- LA 510 National Parks "*
- LA 580 Landscape Preservation "*
- PPPM 522 Grant Proposal Writing
- PPPM 532 Urban Revitalization
- PPPM 540 Land Use and Growth Management
Students are required to take electives that support their focal area and interests. Electives not listed in the curriculum indicate a course is under development and has not yet received formal acceptance. ** indicates a course that may be used in the focal area if not being used in the core or architectural history area requirements.

### Focal Area III: Resource Identification and Evaluation

This focal area reveals the insights and investigative tools for archival and cultural resource research to establish the history and context of those buildings, interior spaces, and landscapes that determined settlement, organization, and a sense of place.

### Focal Area III Courses (18 Credits)

The following courses are intended to support the student's chosen focal area by addressing historical trends, practical skills, and issues relevant to the policies and practice of historic preservation.

### 4. INDIVIDUALIZED STUDY (19 CREDITS)

The requirements for research and a thesis or terminal project provide the student with an opportunity for an independent and original investigation that will make a contribution to the current body of knowledge in the field. It also allows the student to investigate his or her individual area of interest. The internship and practicum selection should be appropriate to the particular educational goals of the student and demonstrate the opportunity of gaining experience in the historic preservation field.

Note: Though the internship and practicum itself is completed during the summer between the student’s first and second years, the credit is given in the preceding winter term and following fall term through the two seminars. See page 24 for further details.

### 5. ELECTIVES (7 CREDITS)

Students are required to take electives that support their focal area and interests. Electives not listed within a focal area require adviser approval. See the following pages for lists of specific classes.

Total credits required: 73 credits
## SAMPLE CURRICULUM

### FIRST YEAR  
**42–45 CREDITS**

**Summer Term**  
Pacific Northwest Preservation Field School \( \ldots 2 \)

**Fall Term**  
- Introduction to Historic Preservation \( \ldots 3 \)
- American Architecture from a Preservation Perspective I \( \ldots 4 \)
- Transportation and Preservation (or focal area course) \( \ldots 3 \) or \( 4 \)
- Elective course \( \ldots 3 \)
- **Total \( \ldots 13 \) or \( 14 \)**

**Winter Term**  
- Practicum: Internship I \( \ldots 2 \)
- American Architecture from a Preservation Perspective II \( \ldots 4 \)
- Historic Survey and Inventory Methodology \( \ldots 3 \)
- Preservation Economics (or focal area course) \( \ldots 3 \) or \( 4 \)
- **Total \( \ldots 12 \) or \( 13 \)**

**Spring Term**  
- National Register Nomination \( \ldots 3 \)
- American Architecture from a Preservation Perspective III \( \ldots 4 \)
- Legal Issues in Historic Preservation (or focal area course) \( \ldots 3 \)
- Elective course \( \ldots 3 \) or \( 4 \)
- Independent research \( \ldots 2 \)
- **Total \( \ldots 15 \) or \( 16 \)**

### SECOND YEAR  
**33–36 CREDITS**

**Summer Term**  
- Internship or Practicum (credit given through spring and fall seminars) \( \ldots 0 \)

**Fall Term**  
- Thesis Proposal \( \ldots 3 \)
- Seminar: Internship II \( \ldots 3 \)
- Focal area course \( \ldots 3 \) or \( 4 \)
- Elective course \( \ldots 3 \)
- **Total \( \ldots 12 \) or \( 13 \)**

**Winter Term**  
- Thesis or Terminal Project \( \ldots 6 \)
- Elective course \( \ldots 3 \)
- Focal area course \( \ldots 3 \) or \( 4 \)
- **Total \( \ldots 12 \) or \( 13 \)**

**Spring Term**  
- Thesis or Terminal Project \( \ldots 6 \)
- Focal area course \( \ldots 3 \) or \( 4 \)
- **Total \( \ldots 9 \) or \( 10 \)**

### MINIMUM CREDITS REQUIRED  
**73**

A degree planning worksheet is located on the website at hp.uoregon.edu/resources/forms. Once you have had the opportunity to look through the courses and options, please make an advising appointment and bring your worksheet to go over your curriculum plan.
Above: White Stag Block, Portland Oregon. Photo: Sally Painter.
CONCURRENT MASTER’S DEGREE REQUIREMENTS

Because historic preservation is inherently an interdisciplinary field, students may wish to pursue concurrent degrees in another field of study. The University of Oregon offers many graduate degree programs, certificates, and specializations that are excellent supplements to the master of science in historic preservation. Current and former students have pursued concurrent degrees in the following areas: master of community and regional planning (Department of Planning, Public Policy and Management), master of architecture (Department of Architecture), and master of landscape architecture (Department of Landscape Architecture).

Students pursuing two master’s degrees at the University of Oregon must meet the minimum requirements set and administered by the Graduate School. Students should communicate directly with the staff members of the Graduate School in all questions of compliance. Students must submit separate applications to each program and compete for admission. A concurrent master’s degree form and curriculum plan must be filed upon acceptance to the concurrent degree programs. This form is available from the Graduate School’s website: gradschool.uoregon.edu/policies-procedures/concurrent-degrees.

The Historic Preservation Program requires that all concurrent master’s students complete course work in the following areas:

- Core courses .............................. 17
- Focal area courses (five-course minimum) .............................. 22
- Individualized study:
  - Internship and Practicum .............................. 5
  - Thesis or Terminal Project .............................. 12
- Total credits required .............................. 56

Note: The required core courses cannot be counted toward the credit requirements of the other concurrent major.

Please see pages 10–12 for course listings and explanations of each of the above listed areas. A concurrent degree planning worksheet, to help you outline the historic preservation portion of your degree plan, is available on the website: hp.uoregon.edu/resources/forms. Students should work closely with their advisers and the Graduate School to ensure that all requirements are met in a timely manner.

In addition to concurrent degrees, the historic preservation program encourages students to seek out graduate certificates in related fields. Please visit the individual websites for listed certificates for admissions and course information:
- Museum studies: aaa.uoregon.edu/certificates/museum-studies
- Nonprofit management: pppm.uoregon.edu/grad/nonprofit
- Ecological design: aaa.uoregon.edu/certificates/ecological-design
- Oregon leadership in sustainability: olis.uoregon.edu
CONTINUOUS ENROLLMENT AND ON-LEAVE POLICY

An on-leave term is a term during the fall-through-spring academic year in which the student is not officially enrolled or paying tuition. Official on-leave status is achieved when the student submits the appropriate form (located here: gradschool.uoregon.edu/policies-procedures/leave) and it is approved. Students who are not currently enrolled and did not submit this form are unofficially on leave. This is against university policy and these students have few legal rights concerning reenrollment. Students who fail to follow the rules of continuous enrollment and on-leave status as described above and in the University of Oregon Graduate Policies and Procedures documents (gradschool.uoregon.edu/policies-procedures/masters) may face financial consequences when they return to complete their degrees.

A maximum of seven years is allowed from initial enrollment to the granting of the degree. Since time on leave does not extend this seven-year maximum, taking three terms on leave substantially reduces the total amount of time available to achieve a degree unless the student enrolls in a light schedule over many terms.

UNDERGRADUATE MINOR: ADVANCED STANDING

There is an accelerated master’s track for University of Oregon undergraduate students who complete the historic preservation minor (27 credits) and who have taken a select portion of the core historic preservation course work for graduate credit.

Courses offered with the grading option of “graded” or “pass/no pass” must be taken for a letter grade. The following courses must be taken for graduate credit and the student must receive a grade of B or better for the course to be recorded at the graduate level.
- AAAP 511 Introduction to Historic Preservation (3 credits)
- AAAP 551 Historic Survey and Inventory Methods (3 credits)
- AAAP 531 National Register Nomination (3 credits)

To obtain permission to enroll in a course for graduate credit, please visit the Graduate School’s web page for the appropriate form and eligibility criteria found here: gradschool.uoregon.edu/policies-procedures/resgradcredit.

If admitted as a master’s candidate to the program, subsequent to the awarding of a bachelor’s degree and a minor in historic preservation, the master’s candidate must complete an additional 46 graduate credits in historic preservation, instead of the traditional 73 credits required for the two-year master’s degree. Students interested in pursuing this option should meet directly with the program director for advising on the appropriate curriculum path.
CORE COURSES

AAAP 508 Workshop: Pacific Northwest Preservation Field School (2 credits)
This one-week field school offers hands-on preservation skills in site documentation, conservation practice, recording, and restoration as the focus of the course work. Students work alongside University of Oregon faculty members and regional professionals to preserve different sites in the Pacific Northwest. (Sardell)

AAAP 510 Experimental Course: Preservation Economics (3 credits)
Most of us accept that preservation will not take place in the private sector unless it makes economic sense. The objective of this course is to help preservation students understand why this is, as well as to arm them with the tools needed to find creative and profitable solutions for saving historic buildings. This course is offered at the UO in Portland location. Offered every other year. (Engeman)

AAAP 511 Introduction to Historic Preservation (3 credits)
Provides a broad overview of the field of historic preservation for students interested in learning about the work of preserving historic resources. Topics covered include a brief history of preservation in America; the legal, administrative, and fiscal workings of the layered government partnerships; the roles of private and nonprofit preservationists; and the various occupational opportunities for preservationists. It will also cover the dating and categorization of historic buildings through examination of architectural styles and building materials. (Sardell)

AAAP 515 Transportation and Preservation (3 credits)
Addresses issues of compliance with preservation laws and guidelines in relation to transportation development projects. Special attention is paid to understanding processes, such as how to fulfill Section 106 requirements, and how to negotiate the needs of the resource with the needs of the transportation authorities. Case studies and examples from throughout Oregon will be examined to illustrate key points. (Bell)

AAAP 531 National Register Nomination (3 credits)
Historic district designation acknowledges the scarcity and cultural worth of the buildings and sites, causing, in most cases, property values to rise, and allowing for modest tax incentives. The course offers an overview of the National Register of Historic Places process, various types of nominations, and instructions on preparing a registration form. Emphasis is placed on criteria, evaluation, historic context development, property recordation, and research strategies. Prerequisite: AAAP 511 Introduction to Historic Preservation. (Carter)

AAAP 541 Legal Issues in Historic Preservation (3 credits)
Interprets the relationships between general public policy and historic preservation; investigates the conflicting values between preservation and environmentalism; and examines how best to position ourselves, as preservationists, in broader land-use policy debates and issues. Offered every other year. (Eisemann)

AAAP 551 Historic Survey and Inventory Methodology (3 credits)
Methodology for conducting reconnaissance and intensive surveys utilizing U.S. National Park Service standards. Students will identify and record distinctive features of historic resources. Course work includes completion of Oregon inventory forms, site plan drawing, photography, and research. (Sardell)

AAAP 610 Experimental Course: Thesis Proposal (3 credits)
Introduces a range of research methodologies important to the field of historic preservation. Students develop their preliminary research proposals for their terminal research theses or projects. (Ranzetta)
ARCHITECTURAL HISTORY COURSES

AAAP 510 Experimental Course: American Building Construction History (4 credits)
Stresses the historical and theoretical dimensions of American building technology. Through an interdisciplinary approach, this course offers a study of the tools, techniques, and technological forces that shaped the American built environment from seventeenth-century New England to Chicago at the end of the nineteenth century. Occasional offering. (Heath)

AAAP 510 Experimental Course: American Common Houses (4 credits)
Introduces students to the interpretation of house plans, reading the exteriors of buildings, and documenting vernacular change over time. Occasional offering. (Hubka)

AAAP 510 Experimental Course: Identifying and Interpreting Vernacular Settings (4 credits)
A reading, discussion, and analysis seminar on the critical literature in vernacular studies. Building forms and plan types are discussed as examples of cultural and regional expression. A term paper or project is required. Occasional offering. (Heath)

AAAP 521, 522, 523 American Architecture from a Preservation Perspective I, II, III (4 credits each)
The American built environment is examined from the Colonial Era to present day. Marked changes in materials, technologies, and spatial usage are discussed. Stylistic development and building type analysis are addressed for preservation classification purposes, and the cultural, historical, and physical contexts within which various building forms existed are stressed in this series of courses. (Heath)

FOCAL AREA COURSES

AAAP 510 Experimental Course: Adaptive Use Studio (4 credits)
Explores sustainability and preservation issues surrounding the adaptive reuse and development of structures in urban landscapes in a studio environment. This course is offered at the UO in Portland location. Offered every other year. (Miller Dowell)

AAAP 510 Experimental Course: Building Pathology: Masonry (4 credits)
This course covers a variety of masonry types, their evolution and stylistic context, their basic construction principles and context of use over the last centuries as well as their sustainability for the future. Focus will be given to deterioration and repair as well as assessment, material analysis, and conservation. Offered every other year. (Allsopp)

AAAP 510 Experimental Course: Building Pathology: Wood (4 credits)
Designed on the premise that a fundamental understanding of material properties of wood and how and why it ages is essential for good preservation. By the end of the course, students should be able to identify major risks and the underlying causes of wood condition, extract historic information from wood fabric, and select the most sensible and sustainable treatment strategies in practice. Offered every other year. (Radivojevic)

AAAP 510 Experimental Course: Graphic Communication of Ideas (3 credits)
The primary objective of the course is to develop a fundamental understanding and facility with basic graphic representation and documentation of the built environment. While focusing on the documentation of buildings using basic drawing skills and standard preservation practices, students expand their level of graphic literacy through a series of exercises and projects. Occasional offering. (Hubka)
AAAP 510 Experimental Course: Historic American Buildings Survey (4 credits)
Demonstrations and exercises teach technical drawing skills and issues related to building diagnostics. Course work may include production of drawings conforming to the Historic American Buildings Survey (HABS) and the Historic American Engineering Record (HAER) standards as outlined by the U.S. National Park Service. (Alisopp)

AAAP 510 Experimental Course: Historical Archaeology and Preservation (3 credits)
Explores the role of historical archaeology within the broader field of historic preservation. The course covers the development of the field in North America, and how the common interest in buildings and use of documents and oral history brings historical archaeologists into close alignment with methods relied upon in historic preservation. (Minor)

AAAP 510 Experimental Course: Principles of Adaptive Reuse (3 credits)
Intended as an introduction to the guiding principles of the Secretary of the Interior’s Standards for Rehabilitation. Case studies and guest speakers discuss the various constraints and opportunities addressed in actual projects undertaken within Oregon. This course is offered at the UO in Portland location. Offered every other year. (Kunowski)

AAAP 510 Experimental Course: Sense of Place: Oregon (3 credits)
Students investigate the diverse physical and cultural landscapes of Oregon and the forces that brought them into being. Students develop a deeper understanding of Oregon’s historic fabric, from form and function to the timeless notion that people make place. Field trips, guest lecturers, discussion, and presentations are intended to ignite students’ understanding of a sense of place. (Bell)

AAAP 510 Experimental Course: Sustainable Preservation (4 credits)
A full-bodied investigation into the relationship between preservation and sustainability philosophies and methodologies. Students research how “green” is measured, understand what those measurements tend to value, and assess how they might affect historic preservation efforts. Teams of students are organized to apply the highest methods and goals of both fields to local buildings. (Alisopp)

OXEU 688 Croatia: Field Recording Methods and Site Documentation (3 credits)
Training in basic fieldwork recordation and analysis techniques, resulting in documentation such as architectural plans, textual descriptions, photographs, and interpretive drawings. Exploration of construction techniques and form or plan types through a series of case studies. Students will collect ethnographic data of certain objects and interpret their uses within the context of their cultural settings. This course is offered at the Croatia Conservation Field School. (Thallon)

OXEU 688 Croatia: Interpreting Cultural Landscapes (3 credits)
Focuses on heritage conservation issues, heritage protection policies, and architectural documentation requirements—comparing practices in the U.S. with those in Croatia. The history of urban growth and the changes in town form within the region will provide a framework for policy and preservation practice discussions. Students will collect ethnographic data of certain objects and interpret their uses within the context
Geography  geography.uoregon.edu
GEOG 544 Cultural Geography (4 credits)
GEOG 571 North American Historical Landscapes (4 credits)
GEOG 581 GIScience I (4 credits)

History of Art and Architecture  arthistory.uoregon.edu
ARH 510 Experimental Course: Modern Architecture (4 credits)
ARH 563 Native American Architecture (4 credits)
ARH 567 Chicago Architecture (4 credits)
ARH 568 Oregon Architecture (4 credits)
ARH 578 History of Landscape Architecture II (4 credits)

Interior Architecture  architecture.uoregon.edu/programs/iarch
IARC 574 History of Interior Architecture I (3 credits)
IARC 575 History of Interior Architecture II (3 credits)
IARC 576 History of Interior Architecture III (3 credits)

Landscape Architecture  landarch.uoregon.edu
LA 510 Experimental Course: National Parks (4 credits)
LA 580 Landscape Preservation (4 credits)

Oregon Leadership in Sustainability  olis.uoregon.edu
OLIS 620 Urban Ecological Design (4 credits)

Planning, Public Policy and Management  ppmu.uoregon.edu
PPPM 522 Grant Proposal Writing (1 credit)
PPPM 532 Urban Revitalization (4 credits)
PPPM 540 Land Use and Growth Management (4 credits)
PPPM 542 Sustainable Urban Development (4 credits)
PPPM 548 Collaborative Planning and Management (4 credits)
PPPM 552 Public Participation and Diverse Communities (4 credits)
PPPM 581 Resource Development for Nonprofit Organizations (4 credits)
PPPM 626 Community Planning Workshop (5 credits)
PPPM 680 Managing Nonprofit Organizations (4 credits)

Note: This is not an exhaustive list of all available courses. If participating departments offer other courses that apply to the historic preservation field of study, the program will address the course’s eligibility to count toward these areas in the term offered.
FACULTY

HISTORIC PRESERVATION
PROGRAM DIRECTOR

Kingston Heath
Professor of historic preservation. BA in English from Lake Forest College, an MA in art history from the University of Chicago; and an MA and PhD in American studies from Brown University. Previous work experience includes state architectural historian for the Montana State Historic Preservation Office, supervisor of historical interpretation at Mystic Seaport, and professor of architectural history and historic preservation at Montana State University and the University of North Carolina at Charlotte. Past three-term member of the board of directors of the Vernacular Architecture Forum. Areas of specialization include vernacular architecture of the American West, New England workers’ housing, American building construction history, and vernacular architecture theory.

In addition to several articles and book chapters, Heath is the author of The Patina of Place: The Cultural Weathering of a New England Industrial Landscape, winner of a 2002 Abbott Lowell Cummings Prize by the Vernacular Architecture Forum “in recognition of the outstanding work in North American vernacular studies,” and Vernacular Architecture and Regional Design (2009). As founder of the Croatia Conservation Field School, an interdisciplinary program that focuses on the traditional stone building culture of Croatia’s Central Dalmatian Coast, he has served for several years as director and continues to foster its growth. Teaches American Architecture from a Preservation Perspective I, II, and III; American Building Construction History; and Interpreting Vernacular Settings.

PACIFIC NORTHWEST FIELD SCHOOL DIRECTOR

Shannon Sardell
Adjunct instructor of historic preservation. BArch and an MS in historic preservation from the University of Oregon. Sardell has directed the Pacific Northwest Preservation Field School since 2009 and also teaches courses for the historic preservation program. Areas of interest include barns, vernacular architecture, building technology, building trades education, condition assessment, and other architectonic approaches to design and historic preservation. Previous work experience includes positions in the Oregon State Historic Preservation Office and on the Eugene Historic Review Board; currently works as a preservation consultant. Teaches Introduction to Historic Preservation, Historic Survey and Inventory Methodology, and course work related to the Pacific Northwest Preservation Field School.

DEPARTMENT FACULTY

Lauren Allsopp
Adjunct instructor of historic preservation. BA in history from the University of Michigan, MS in historic preservation from Columbia University, and a PhD in architecture from the University of Edinburgh. Areas of interest include conservation and historic preservation advocacy for revitalizing neighborhoods. Previous work experience includes conservator at the RMS Titanic and the Henry Ford Museum, and academic positions at the Frank Lloyd Wright Foundation and Eastern Michigan University; currently works as principal of Anthemion International. Author of The Lost Art of Tabby: Preserving Oglethorpe’s Architectural Legacy (1991). Teaches Building Pathology: Masonry, Historic American Buildings Survey, and Sustainable Preservation.

Chris Bell
Adjunct instructor of historic preservation. BA in architectural studies from Williams College and an MS in historic preservation from the University of Oregon. Areas of interest include understanding and documenting the cultural markers of early immigrant communities in Oregon. Previous work experience as a preservation consultant and cultural resource specialist; currently works as a cultural resource program coordinator for the Oregon Department of Transportation. Teaches Sense of Place: Oregon, and Transportation and Preservation.

Liz Carter
Adjunct instructor of historic preservation. BA in Romance languages and an MS in historic preservation from the University of Oregon. Areas of interest include vernacular buildings and landscapes, early Oregon sites, historical archaeology, and women’s contributions to architecture. Previous work experience includes positions in the Oregon State Historic Preservation Office and on the Eugene Historic Review Board; currently works as a preservation consultant. Teaches National Register Nomination.

Eric Eisemann
Adjunct instructor of historic preservation. BA in anthropology and religion from Knox College, MA in folk studies and historic preservation planning from Western Kentucky University, and a JD in environmental law from Lewis and Clark College. Areas of interest include land-use
law and preservation advocacy. Previous work experience includes positions with the Historic Preservation League of Oregon and the Oregon Preservation Resource Center; currently works as a land-use planner and consultant. Teaches Legal Issues in Historic Preservation.

**Jessica Engeman**

Adjunct instructor of historic preservation. BA in art history, MS in historic preservation, and a MCRP from the University of Oregon. Areas of interest include historic commercial rehabilitations involving historic tax credits and project management for historic redevelopment projects. Currently works as a historic preservation specialist in real estate development in the Portland area. Teaches Preservation Economics.

**Kristin Grieger**

Adjunct instructor and adviser for the School of Architecture and Allied Arts Office of Professional Outreach and Development for Students (PODS). BA in psychology from the University of California at San Diego and a MS in counseling from the University of Oregon. Areas of interest include career development and assessment, as well as internship and job-search preparation and implementation. Teaches Practicum: Internship I and Seminar: Internship II.

**Thomas Hubka**

**Henry Kunowski**

Adjunct instructor of historic preservation. BArch from the University of Oregon. Areas of interest include adaptive reuse, cultural resource management, strategic planning, and technical documentation. Previous work experience includes positions with the Oregon Parks and Recreation Department, and positions in both the public and private sectors as a cultural resource manager; currently works as a preservation consultant. Teaches Principles of Adaptive Reuse.

**Amy Miller Dowell**

Adjunct instructor of historic preservation. BA in environmental design in architecture from the University of California at Berkeley, MArch and an MS in historic preservation from Columbia University. Areas of interest include community revitalization, preservation, urban design, housing, and redevelopment. Previous work experience includes various leadership roles with the Portland Development Commission, and architecture design positions with firms in Oregon and California; currently works as an architect and serves on the Center for Architecture’s board of directors. Teaches Adaptive Use Studio.

**Rick Minor**

Adjunct instructor of historic preservation. BA in anthropology from California State University at Fullerton and an MA and PhD in anthropology from the University of Oregon. Areas of interest include historic archaeology and collaborative interdisciplinary research with historic preservation and geology. Previous work experience includes positions as a research associate and contract archaeologist with the Oregon State Museum of Anthropology; currently works as a senior archaeologist and vice president of Heritage Research Associates, a consulting firm specializing in archaeological and historical research in the Pacific Northwest. Teaches Historical Archaeology and Preservation.

**Suzana Radivojevic**

Adjunct instructor of historic preservation. BScFE in wood processing from the University of Belgrade, Serbia, and a PhD in wood science from the University of Toronto. Areas of interest include preservation of historic wood, nondestructive testing and characterization, and dendrochronological dating. Previous work experience includes teaching and research positions in Serbia, Canada, New York, and Oregon. Teaches Building Pathology: Wood.

**Kirk Ranzetta**

Adjunct instructor of historic preservation. BA in historic preservation from the University of Mary Washington and an MA and PhD in urban affairs and public policy from the University of Delaware. Research interests include tobacco culture in St. Mary’s County, Maryland. Work experience includes review and compliance specialist and survey and registration coordinator for the Oregon State Historic Preservation Office; currently works as senior architectural historian for URS, a consulting firm in Portland. Author of *I'm Goin' Down Country: An Architectural Journey Through St. Mary’s County, Crownsville, Maryland* (2010). Teaches Thesis Proposal.
CONTRIBUTING FACULTY

For professor biographies, please see individual department and program websites.

Department of Architecture
architecture.uoregon.edu

Erin Cunningham, PhD, assistant professor of architecture.

Howard Davis, professor of architecture.

Mark Gillem, PhD, associate professor of architecture and landscape architecture.

Brook Muller, associate professor of architecture and associate dean for academic affairs in the School of Architecture and Allied Arts.

Donald Peting, associate professor emeritus of architecture and former Historic Preservation Program director, former Pacific Northwest Preservation Field School director, and former associate dean for the School of Architecture and Allied Arts.

Rob Thallon, associate professor of architecture, and associate dean for administration in the School of Architecture and Allied Arts.

Jenny Young, professor of architecture.

Department of the History of Art and Architecture
arthistory.uoregon.edu

Albert Narath, PhD, assistant professor of the history of art and architecture.

Leland Roth, PhD, Marion D. Ross Distinguished Professor of Architectural History, professor emeritus.

Department of Landscape Architecture
landarch.uoregon.edu

Kenneth Helphand, Philip H. Knight Professor of Architecture and Allied Arts, professor emeritus.

Robert Z. Melnick, professor of landscape architecture, former dean of the School of Architecture and Allied Arts.

Department of Planning, Public Policy and Management
pppm.uoregon.edu

Renee Irvin, PhD, associate professor of planning, public policy and management; director of the Master of Nonprofit Management Program, Master of Public Administration Program, and the Graduate Certificate in Nonprofit Management Program.

Gerardo Sandoval, PhD, assistant professor of planning, public policy and management.
INTERNSHIP AND PRACTICUM

GRADUATE INTERNSHIP AND PRACTICUM GUIDELINES

Graduate students in the Historic Preservation Program are required to complete a 180-hour internship or training practicum, normally undertaken in the summer between the first and second year of enrollment. Internships and practicums provide the student with practical, hands-on preservation experience within their specific area of interest. Students are encouraged to select an internship or practicum based on their thesis or terminal project, their career aspirations, or both. During winter term of the first year, students enroll in the 2-credit Practicum: Internship I course (AAAP 609) in preparation for identifying and securing their internship sites, and optimizing their internship experience with personal, professional, and research goals. Students then enroll in the 3-credit Seminar: Internship II course (AAAP 607) during the fall term of the second year, at which time they synthesize their experience and develop a presentation, poster, and portfolio of their work and present it to peers, colleagues, and the schoolwide community. Please visit the internships page of our website for further details, including examples and descriptions of past student internships: hp.uoregon.edu/resources/internships.

While the Croatia Conservation Field School and the multiple sessions of the Pacific Northwest Preservation Field School may be applied toward the field practicum and summer internship requirement, many paid internship options exist. Our goal as a program is that every student finds a growth experience that is within economic means and is related to developing his or her skill base as a professional.
Each year the Pacific Northwest Preservation Field School attracts a range of participants, from practicing cultural resource professionals to undergraduate and graduate students to novices with little background in the field but who possess a love for heritage and a desire to learn. The University of Oregon’s Historic Preservation Program developed this field school to provide participants with the opportunity to experience preservation firsthand.

The field school is intended for anyone interested in working in a hands-on environment, learning traditional building practices, and experiencing a spectacular part of the United States. Many participants have used the field school to launch into historic preservation as a discipline or career.

The field school is held in mid-August to mid-September in repeatable one-week sessions. Each of the one-week sessions has a different focus and presents opportunities to learn a range of skills. Sessions balance seminars and tours of the local area with hands-on experience. Visit hp.uoregon.edu/fieldschools/pnw for more information and a complete archive of previous year’s sites.

The twentieth annual Pacific Northwest Preservation Field School will take place in eastern Idaho. Five one-week sessions will be offered focusing on a range of related topics presented by visiting lecturers, including cultural landscapes, cultural resource management, preservation technology, and sustainability.

All sessions will take place at the Vardis Fisher Homestead, a new resource recently acquired by the Bureau of Land Management approximately one half hour away from Idaho Falls, Idaho. Vardis Fisher is a famous Idaho author; he is most known for *Mountain Man*, though he has written many other works. The 431-acre homestead site along the South Fork of the Snake River has many opportunities for work in archaeology, landscape preservation, and building preservation and restoration. The 2014 field school efforts will explore all of the opportunities that the site and its structures have to offer. This might include but is not limited to studies of the important history of Native Americans, landscape features, structure stabilization, log work, and window and door repair.

Sessions will be led by one or more professionals specializing in the techniques and materials involved. Faculty members come from across the United States to both teach and participate in the field school. Participants can earn 2 graduate credits from the University of Oregon for each one-week session. It is mandatory for incoming graduate students to enroll in at least one session as part of their degree requirements. For more information and application materials, please contact Shannon Sardell, Field School Director Historic Preservation Program School of Architecture and Allied Arts 5233 University of Oregon Eugene OR 97403-5233 E-mail: pnwfs@uoregon.edu

Applications may be downloaded at the website listed above.
Summer 2014 (mid-June to early July) will mark the sixth season of our international field school on the Central Dalmatian Coast of the Republic of Croatia. Founded in 2009, the field school is sponsored by the Historic Preservation Program, with participation of the Department of Landscape Architecture, the School of Architecture and Allied Arts, and the Ministry of Culture in Trogir, Croatia. It provides students with an opportunity to experience the preservation of traditional stone environments on the Adriatic Sea and take part in comparative preservation practices.

The field school is ideally situated on the heritage-rich Dalmatian Coast in the vicinity of Trogir, Croatia. Though many of the villages in the area have been abandoned, the region retains numerous limestone architectural features and a well-preserved cultural landscape. The City of Trogir in which the field school is centered is itself a UNESCO World Heritage Site dating from Roman times. Much of its architectural expression evokes the medieval period with winding streets and towering limestone façades. Trogir is surrounded by other multiple World Heritage Sites. These include Diocletian’s Palace in Split to the south and the Cathedral of St. James in Sibenik to the north, both of which offer a juxtaposition to the vernacular resources under investigation at the field school.

The goal of the field school is to involve students in the preservation process and to educate them about the historic architectural and cultural significance of these landscapes. It also seeks to provide the opportunity for participants to work directly with the culture that generated these important works of art and architecture. In order to begin to grasp the many facets of this building culture, the students participate in a broad range of experiences from tours and lectures by regional scholars, to demonstrations and activities by local Croatian craftspeople. Students will have the opportunity to undertake stone carving and visit a fifteenth-century monastery and astronomy laboratory on the island of Brac. Through these experiences, students will learn not only the fundamentals of preservation practice, but gain exposure to international cultural policy.

Students will earn 9 academic credits at the four-week field school that takes place in two sessions with a three-day intersession break. During this intersession, students are encouraged to visit important sites of the area according to their interests. Students enrolled in the Historic Preservation Program may choose to apply these credits toward their internship and practicum requirement from the Croatia field school. However, because the field school session falls short of the 180 hours needed to fulfill this requirement, the fall internship seminar requires the submission of a research paper or additional development of the site documentation.

**2014 Instructors**
Professor Kingston Heath
Associate Professor Rob Thallon
Radoslav Buzancic
Jasna Dasovic
Ivan Kovacic

**2014 Courses**
OXEU 688 Croatia: Field Recording Methods and Site Documentation (3 credits)
OXEU 688 Croatia: Interpreting Cultural Landscapes (3 credits)
OXEU 688 Croatia: Preservation Field Practicum (3 credits)

For more information, visit hp.uoregon.edu/fieldschools/croatia.
Students in the Historic Preservation Program must choose to complete either a thesis or a terminal project to fulfill their degree requirements. Topics chosen for theses and terminal projects by students indicate the interests and range found in the program. Please consult a list of previous topics and authors here: hp.uoregon.edu/program. The following descriptions are consistent with Graduate School guidelines.

**THESES AND TERMINAL PROJECTS**

**THEESIS**

A thesis is a substantial paper presenting independent and original research that makes a contribution to the current body of knowledge in the field. The data, including field evidence, is analyzed—not just described—and placed within a conceptual framework explaining the study’s significance to the field of historic preservation. The author may conduct an original investigation, or develop an original interpretation of existing research, literature, or both, but it is incumbent upon the researcher to establish the significance of the findings in relation to the field.

The Graduate School recommends five basic chapters or divisions: an introduction of the problem (the thesis question to be tested), a review of the literature in the field, an explanation of the materials and methods used in solving the problem, an analysis of the data, and a conclusion establishing the significance of the study. A full bibliography must be included. There is no required length for a thesis, but fifty to one hundred pages (double-spaced) is usually an appropriate range.

Theses must conform to Graduate School specifications as stated in the University of Oregon Thesis and Dissertation Style and Policy Manual; the Graduate School may reject a thesis that is not in compliance with this format. Students should familiarize themselves with the Graduate School standards of style and form along with all posted deadlines for thesis and form submittals (gradschool.uoregon.edu/policies-procedures/masters/thesis-terminal-project). The thesis is submitted to both the Graduate School and the program, and will be listed on the student’s transcript and kept in the Knight Library collection.

**TERMINAL PROJECT**

A terminal project is a presentation that embodies the knowledge and skills acquired in the study of historic preservation. Terminal projects are often directed toward a known audience, are field-based, stress the application of professional skills, and may require a more flexible presentation of work than a written document (the prescribed format for a terminal project must be approved by the student’s committee). Projects of more than local interest would be better served through the thesis format, since a national database of thesis topics can alert other scholars to the work.

Different in scope and conceptual framework than a thesis, a terminal project has no set format. However, selection of the terminal project option does not lessen the necessity for academic rigor in substance and documentation. Thesis standards related to content and notes must still be followed: a written statement of purpose, methods of application, and documentation must be included. The terminal project option can accommodate original (and likely oversized) drawings, or can integrate graphics and text in a less restrictive manner than a thesis (however, the final document submitted is limited to a bound document—thirteen inches for vertical, horizontal, or both dimensions). The terminal project is submitted to the program and then to the School of Architecture and Allied Arts Library collection. It is not submitted to the Graduate School and is not noted on the student’s transcript.

**THESIS OR TERMINAL PROJECT PROPOSAL AND DEVELOPMENT**

The proposal is an initial statement of intention, and forms the basis for further development of the thesis or terminal project. During the first year of study, students begin to develop their research topic and prepare for the selection of their thesis or terminal project committee.

In the spring term of the first year of study, students should enroll in AAAP 601 Research (2 credits) with their intended committee chair for developing their annotated bibliography. The annotated bibliography will inform the literature review portion of the final proposal, as well as the final research document.

In the fall term of the second year of study, students should enroll in AAAP 610 Experimental Course: Thesis Proposal (3 credits). This course introduces a range of research methodologies in historic preservation. Students explore their own area (or areas) of research and methodological interest throughout the course, and develop their research proposal for their thesis or terminal project.

The thesis or terminal project committee should be comprised of one committee chair and at least one committee member (often referred to as the secondary reader). For both theses and terminal projects, the chair and committee member are both responsible for approving and signing the final document prior to submission. It is the responsibility of the student to work closely with the proposed committee both individually and collectively during development of the proposal.

- For students completing a thesis, the committee chair must be a UO tenure-related faculty member. Ideally, this would be a tenure-track faculty member in an academic program or department associated with the
MEETING TO APPROVE THE THESIS OR TERMINAL PROJECT PROPOSAL

At the end of the fall term during the second year, students formally present their research proposals (a twenty-minute presentation) to their committee members, as well as historic preservation students and faculty members. The proposal presentation should focus on the problem statement, conceptual framework, main research questions, and research design of the proposed study. Questions and comments related to the proposal are then offered by those in attendance. Four outcomes of this meeting are possible:

1. Approval: If all members of the student’s thesis or terminal project committee agree that the proposal is satisfactory as submitted, it is approved.

2. Approved as modified: If the student making the proposal and all members of the student’s thesis or terminal project committee agree on modifications to the proposal, the proposal is approved as modified. The chair of the student’s committee will write the modifications on the file copy of the Thesis or Terminal Project Proposal Approval form, or on a record copy of the proposal that will be attached to the form and submitted to the program office.

3. Approved with instructions to the student’s committee: If the student making the proposal and all members of the student’s thesis or terminal project committee agree that modifications to the proposal are not fully resolved at the conclusion of the meeting but can be satisfactorily resolved by the student’s committee at a subsequent meeting, the proposal is approved, subject to general instructions to the student’s committee about this resolution. The chair of the student’s committee will write the instructions on the file copy of the Thesis or Terminal Project Proposal Approval form, or on a record copy of the proposal that is attached to the form and submitted to the program office.

4. Resubmit: If none of the three potential outcomes listed above is satisfied, the proposal must be resubmitted and the presentation repeated.

At the conclusion of the presentation, the chair of the student’s committee and the Historic Preservation Program director will indicate their support for the approved proposal, plus any approved modifications or instructions, by signing the file copy of the Thesis or Terminal Project Proposal Approval form. This file copy will be kept in the program office and copies will be made available to the members of the student’s committee and to members of the Historic Preservation Committee. The student cannot register for thesis or terminal project credits until after the proposal has been approved and the approval form has been submitted to the program office.

If your research will involve human subjects (i.e., living persons about whom you obtain data through direct interaction-intervention or otherwise acquire personally identifiable information in your research), you are required to obtain approval for your research protocol from the Committee for the Protection of Human Subjects before collecting data. Guidelines for the preparation of protocols are available from Research Compliance Services and available online here: humansubjects.uoregon.edu/index.cfm?action=irb. You will be asked for your approved protocol number when you apply for graduation.

THESIS OR TERMINAL PROJECT REVIEWS AND DEVELOPMENT

It is the responsibility of the student to maintain contact with each member of the thesis or terminal project committee during the development of the thesis or terminal project, to keep all members informed of procedures, and to make all arrangements for committee meetings. The student’s committee has sole responsibility for directing the thesis or terminal project after the proposal has been approved. In the event of procedural conflicts that cannot be resolved by the student and the student’s committee, any of the parties may bring the conflict to the Historic Preservation Committee for mediation.
At least one full committee meeting should be held during each term to discuss the student’s progress and to resolve any issues or differences that may arise among the student and the committee members. Students should plan on meeting with their committee early in the year to draft an outline of their thesis or terminal project work process, along with a timeline for submitting work and receiving faculty responses.

In order for the thesis candidate to perform at his or her best, and to allow the committee sufficient time to evaluate submitted drafts properly, **students who anticipate submitting their work for final review at the end of the year (spring term) should send a complete draft of their work to their reviewers at the end of winter term.** If a student foresees the need to extend their thesis or terminal project past the standard three-term timeline, they must first seek the permission of their committee. This is intended to ensure the ability to complete the scope of the work within the following quarter, as well as to ensure competent progress is being made. This requirement applies to both full-time and on-leave students.

Since the university prefers that students who are not enrolled for at least 3 credits not draw upon university resources, the review of the thesis or terminal project document for students not currently enrolled should be limited to discerning the degree of readiness to present. The thesis committee should then make recommendations for further development of a substantive nature at the beginning of the quarter in which the student is enrolled and scheduled to present.

Portions of the thesis or terminal project may be accomplished away from the campus if circumstances require it, but the student’s committee must approve this in advance, and at least one meeting per term should be held with the full committee.

**THESES OR TERMINAL PROJECT FINAL PRESENTATION AND DOCUMENT SUBMITTAL**

You must be registered for 3 credits of Thesis or Terminal Project in the term in which you make your final presentation.

The student is responsible for all arrangements for a final public presentation within the School of Architecture and Allied Arts of the thesis or terminal project.

- The complete final document draft, including references and illustrations, must be submitted to all reviewers at least **two weeks** prior to the final presentation date to allow adequate time for their committee to review the document and for changes to be made.

- **One week** prior to the final presentation, the student must notify all historic preservation faculty members and graduate students, the dean of the School of Architecture and Allied Arts, and other interested persons of this presentation via e-mail. The student should produce a flier (including date, time, location, and abstract) to send with the e-mail and also to post in Lawrence Hall.

- The format for the final presentation consists of an oral presentation by the student of the work (usually twenty to thirty minutes in length), followed by questions from those in attendance and general discussion; the committee adds final remarks and asks the audience to leave. The student’s committee is required to attend the presentation and, after its completion, it will determine whether the work has been satisfactorily completed.

Once the final document is presented to the committee and the student has completed the final presentation, minor adjustments to the text or design documents (related to reviewers’ remarks) should be made by the candidate before the committee approves the document. The turn-around time is negotiated between the student and the committee chair. After the revisions are complete, the committee chair and committee members sign the final document approval form.

**For thesis students, the following is required:**
- One electronic copy of the approved, final thesis must be uploaded to the Graduate School along with required forms. More information is available here: gradschool.uoregon.edu/thesis-dissertation/thesis-dissertation-submission.
- One bound, approved copy of the thesis must be submitted to the Historic Preservation Program office. Please be sure that the signed committee approval sheet is bound in with your thesis.

**For terminal project students the following is required:**
- One bound, approved copy of the terminal project must be submitted to the Historic Preservation Program office. Please be sure that the signed committee approval sheet is bound in with your terminal project.

**THESIS OR TERMINAL PROJECT EXPECTATIONS FOR COMMITTEE MEMBERS**

Each member of the committee is expected to play a significant role in guiding the thesis or terminal project. The chair of the committee is expected, in addition, to provide administrative oversight to the project, monitoring in general the participation of other committee members, attempting to resolve conflicts, and ensuring that regulations are followed. Should any member of the committee become unavailable for a significant portion of the duration of the project, the chair of the committee, together with the Historic Preservation Program director, will determine whether that member should be replaced. Committee members are expected to make themselves personally available to the student and to view and comment upon draft materials. They should return comments to the student within **two weeks** of the receipt of the draft materials or the receipt of requests for clarification or assistance.

**TERMINAL PROJECTS THAT DERIVE FROM A STUDENT’S PLACE OF EMPLOYMENT**

Students receiving remuneration for work undertaken in an office cannot receive credit for that work even if he or she is the lead designer. Pro bono projects and alternative design proposals may be considered if they are not solely work related. For example, work may be undertaken for credit that originates in an office if the design concepts and design development offers a solution different from what originated in the office, and puts forth a clearly defined scholarly argument by the graduate candidate. Employers may not serve on the terminal project review committee; they may serve as a resource person.
SUGGESTED MASTER’S RESEARCH

TIMELINE

FIRST YEAR

Fall Term and Winter Term
Formulate a thesis or terminal project topic that is significant to the field of historic preservation. Prepare to select a thesis or terminal project committee chair. If attempting a thesis, please keep in mind your committee chair must be a UO tenure-related faculty member. For a terminal project, it may be possible to secure an historic preservation adjunct faculty member as your committee chair.

Spring Term
Enroll in AAAP 601 Research for two credits with your intended thesis or terminal project committee chair as the instructor of record. This is the course in which you will prepare an annotated bibliography concerning your thesis or terminal project research.

SECOND YEAR

Fall Term
- Enroll in AAAP 610 Experimental Course: Thesis Proposal; this course will introduce a range of research methodologies, and students will develop their thesis or terminal project proposal.
- Meet regularly with your committee chair to discuss the development of the thesis or terminal project proposal.
- Complete all requirements and your full thesis or terminal project proposal according to the guidelines provided in the course, including your oral presentation.
- After your presentation, have your committee chair, committee member, and Historic Preservation Program director sign your Thesis or Terminal Project Proposal Approval form and submit to the program office.
- Refine your annotated bibliography from AAAP 601 Research.
- If you will be using human or animal subjects in your research, apply for clearance with the appropriate office. More information is available here: gradschool.uoregon .edu/policies-procedures/research.

Winter Term
- Enroll in AAAP 503 Thesis or AAAP 611 Terminal Project credits with your committee chair as instructor. Because this is an individualized study course, credit loads will vary—there is a total credit requirement of 12 credits for Thesis and for Terminal Project; most students enroll in 6 credits per term. Students enrolled in Thesis will receive a grade of “I,” and those grades will be converted automatically to a grade of “P” upon final approval of your thesis. Terminal Project credits are graded at the end of each term with the earned grade, either “P” or “N.”
- Hold at least one full committee meeting regarding your thesis or terminal project. Plan with your committee the dates that chapter drafts will be due or completed.
- Develop a detailed outline of your full thesis or terminal project.
- Convert your thesis or terminal project proposal into chapter drafts.
- Refine research instruments with input from your committee chair.
- Conduct field research; collect data and begin analysis.
- If you plan to graduate in the spring, you must submit your complete draft to your committee two weeks prior to the end of winter term. This will give your committee adequate time to review your work and gauge your degree of readiness to present in the following term.

Spring Term
- Apply for graduation through GradWeb.
- Hold at least one full committee meeting regarding your thesis or terminal project.
- Complete data collection and continue with ongoing data analysis.
- Write the full draft of the final document; submit the draft to your committee members for review and feedback.
- If appropriate, secure releases for inclusion of copyrighted material in your final document.
- After your committee reviews your final thesis or terminal project draft, select and schedule the date of your final presentation early in the term; this will allow you to create your timeline by working backward from the date of the presentation. Please select a date and time that works for your committee, and then schedule the room and equipment with the Historic Preservation Program office. Presentations may not be given during “dead week” or finals week.
- Submit a complete final copy of your thesis or terminal project to your committee at least two weeks prior to your final presentation.
- Invite historic preservation faculty members, students, the dean of the School of Architecture and Allied Arts, and other interested people to your final presentation at least one week prior to your presentation. Create a flyer with your abstract for posting in Lawrence Hall and for your e-mail invitations.
- Give your twenty- to thirty-minute public presentation, followed by questions and general discussion. Your committee attends the presentation and, after its completion, meets privately to determine whether the work has been satisfactorily completed.
- Make final minor adjustments to the document, responding to your committee and the Graduate School reviewer remarks.
- Submit final, approved thesis or terminal project document according to requirements.
  - Theses must be uploaded to the Graduate School by the stated deadline (usually the Monday of finals week). The bound program copy will be due two weeks after the graduation date (to allow time for the Graduate School editor’s revisions), and submitted to the Historic Preservation Program office.
  - Approved, bound terminal projects must be submitted to the Historic Preservation Program office by the last day of finals week (a copy is not submitted to the Graduate School).
Paradise Inn, Mount Rainier National Park, Washington, built in 1916, is recognized as one of the great lodges of the West. Rehabilitation work, including structural and accessibility upgrades, was completed in 2008. Photo: Courtesy of FFA Architecture and Interiors, Inc.
